Cot & Couch Digital Window — Phase 1 Requirements

Prepared by Digi Carotene · 15 October 2026

Overview

Phase 1 delivers a mobile-first, login-gated digital catalogue ("digital window") for Cot & Couch, Lingampally, plus an admin console to run it. It is not an e-commerce store: there is no cart, checkout or online payment. Every product page ends in **Visit Store** or **Contact**, and the sale itself closes in the showroom or over the phone.

Business goals

- Let sales staff and prospects browse the full portfolio (beds, mattresses, sofas, tables and more) with complete specs, colours, sizes and prices, so in-store conversations start from an informed customer.
- Capture every visitor's verified mobile number as a lead before they see the catalogue.
- Show proof of trust: recent delivery photos on the home page and Instagram videos on every page.
- Keep stock status and post-sale delivery status in one place, with automatic WhatsApp updates to the customer and admin.

Users

User	How they use it
Customer / prospect	Logs in with mobile OTP, browses, filters, shortlists, taps Visit Store or Contact
In-store sales staff	Shows the catalogue on a tablet or phone during walk-ins
Team (staff login)	Uploads delivery photos, updates stock and sale/delivery status
Admin (owner)	Full control: products, categories, prices, discounts, users, permissions, reports

Out of scope for Phase 1: online payment, cart, order placement by the customer, EMI processing, multi-store inventory, and a native mobile app.

Market research: how category leaders structure the catalogue

India's leading furniture and mattress sites all organise browsing the same way: category, then sub-type by size or seating, then filters by material, colour and price, with a product page that leads with price, discount, variant pickers and a structured spec table. Cot & Couch should copy this structure and drop only the cart.

What each benchmark does well

Site	Category / sub-category pattern	Filters seen	Product page strengths
Wakefit – Mattress	Mattress sizes grouped as Single, Diwan (double), Queen, King	Price range, comfort (Soft, Medium Firm, Firm, Bouncy), height 5/6/8/10 in, type/series	Size picker changes price; L × W × H in inches and cm; firmness, layers, cover, warranty and trial as fixed fields
Pepperfry – Sofas	Sofas → 3/2/1 seater, sofa sets, sectionals (LHS/RHS/corner), recliners, sofa-cum-beds	Colour swatch, brand, price, material, more filters	"+14 more colours" on cards; MRP, offer price and % off; warranty months on card; a "Visit your nearest store" link on listings
Pepperfry – sofa PDP	Breadcrumb: Furniture › Sofas › Sofa Sets › style	—	"Select Colour" swatches (15 colours), product details table, specifications list, care, warranty terms, stock count ("Only 1 left")
Wooden Street – Lotus bed	Beds by size and storage type	Size, storage, finish	Finish, size and storage pickers each show their own price; recommended mattress size listed on the bed page

Fields the leaders show on every product page (and Cot & Couch should too)

- Name, brand/collection, SKU, breadcrumb
- Offer price, MRP, % off; an EMI line on most sites
- Variant pickers: colour/finish swatch, size, configuration (storage type, seater count)
- Dimensions in inches and cm, plus weight
- Material, finish, construction details specific to the category
- Warranty length and what it excludes; assembly type; care instructions
- Stock signal (in stock / only N left / made to order)
- Image gallery with zoom and at least one video

Category-specific fields that matter most

- Mattresses: size with exact L × W, thickness, firmness, layer construction, cover, warranty, trial (Wakefit size guide). Indian sizes: Single ~36 in wide, Diwan/Double 48, Queen 60, King 72; lengths 72–96 in.
- Sofas: seating capacity, frame wood, foam density (e.g. 32D PU), seating mechanism (S-spring), upholstery, seat height, firmness, legs (Pepperfry PDP).
- Beds: size, storage type (box / hydraulic / drawer / none), headboard, recommended mattress size, wood and finish (Wooden Street).
- Computer tables: top size, height, keyboard tray, CPU/UPS bay, drawers, load capacity in kg (Green Soul example).

Where Cot & Couch differs. The leaders sell nationally and push online checkout. Cot & Couch is a single Lingampally showroom selling teakwood and premium ranges, so the site should lean on things a marketplace cannot fake: real delivery photos from Hyderabad homes, the Royal Range vs affordable comparison, and a one-tap route to the store or a salesperson.

Customer-facing requirements

Every customer screen sits behind a mobile OTP login, and every product journey ends in Visit Store or Contact. IDs below (CF-xx) are for tracking in sign-off and testing.

Login and lead capture

- **CF-01** Landing screen shows the brand, one line of value, and a mobile number field (+91, 10 digits).
- **CF-02** OTP sent by SMS (WhatsApp OTP as an option); 6 digits, valid 5 minutes, resend after 30 seconds, max 3 resends per hour per number.
- **CF-03** First-time users also give a name and optionally area/pincode; returning users go straight in.
- **CF-04** A clear consent line and privacy-notice link sit under the number field, with an unticked opt-in box for WhatsApp offers (separate from delivery updates).
- **CF-05** Session stays logged in for 30 days on the same device; logout available in the menu.
- **CF-06** Every login creates or updates a lead record (number, name, first seen, last seen, products viewed, CTAs tapped).

Home page

- **CF-07** Hero carousel of **latest delivered images**, newest first, pulled live from the admin gallery (photo, product name link, area, delivery month).
- **CF-08** Category tiles (Beds, Mattresses, Sofas, Computer Tables, and every category admin adds), in admin-set order.
- **CF-09** Featured / new arrivals / Royal Range strip, managed by admin.
- **CF-10** Instagram video strip (see CF-25).
- **CF-11** Store block: address, map link, timings, call and WhatsApp buttons.

Category and listing pages

- **CF-12** Category page shows sub-categories as chips (e.g. Beds: King, Queen, Single; Sofas: 3-seater, 2-seater, L-shape, sofa-cum-bed).
- **CF-13** Product card: main image, name, starting price ("from ₹X"), MRP struck through, **"Up to N% off"** badge, colour dots with "+N colours", stock badge.
- **CF-14** Sort: popularity (admin rank), price low–high, price high–low, newest, highest discount.
- **CF-15** Filters: a common set on every category plus category-specific filters (section below). Filters show result counts, apply without page reload, and can be cleared in one tap. On mobile they open as a bottom sheet.
- **CF-16** Search across product name, category, collection, material and colour.

Product detail page (PDP)

- **CF-17** Image gallery with pinch-zoom, plus product videos; images switch when a colour or variant is picked.
- **CF-18** Variant pickers: colour/finish swatches, size, and configuration (storage type, seater count, thickness). Each combination can carry its own price, stock and images.
- **CF-19** Price block: offer price, MRP, % off, and **maximum discount cap** text (e.g. "Save up to 30% in-store").
- **CF-20** Stock status per variant: In stock, Only N left, Made to order (X–Y days), Out of stock.
- **CF-21** Highlights (3–5 bullets), full description, and a category-specific specification table.
- **CF-22** Warranty, care, assembly and delivery info as collapsible sections.
- **CF-23** Sticky bottom bar with two CTAs: **Visit Store** (map directions + store timings, optional visit-slot request) and **Contact** (call, WhatsApp pre-filled with product name and link, or callback request).
- **CF-24** Related products and "Complete the room" suggestions; recently viewed; shortlist (heart) saved to the user.

Instagram videos on every page

- **CF-25** A reels strip appears on every page. Admin tags each reel to Home, a category or a product, so beds pages show bed reels. Videos are served from the site's own storage with a "View on Instagram" link, so they load fast and don't break when Instagram embeds change.

Categories, filters and product fields

Categories, sub-categories, filters and spec fields are all admin-configurable (attribute templates per category), so adding Wardrobes or Dining next month needs no developer. Phase 1 launches with the set below.

Common fields on every product: name, SKU, category/sub-category, collection/range (e.g. Royal Range, Victoria), brand, short highlights, description, offer price, MRP, % off (auto), max discount cap, colours/finishes, images per colour, videos, dimensions (L × W × H in inches, cm auto-calculated), weight, primary material, finish, warranty (years + exclusions), assembly (pre-assembled / carpenter / none), delivery time, care instructions, stock status, tags, featured flag.

Common filters on every listing: price range slider, discount (10%+, 20%+, 30%+), colour/finish, material, collection/range, availability (in stock / made to order).

Category-specific sub-categories, filters and fields

Category	Sub-categories	Extra filters	Extra PDP fields
Beds	King, Queen, Single, Diwan; Storage beds; Hydraulic beds; Poster beds	Size, storage type (none / box / hydraulic / drawer), headboard (wooden / upholstered / carved), wood type	Recommended mattress size, storage capacity, headboard height, under-bed clearance, wood grade (e.g. teak), polish type
Mattresses	King, Queen, Double, Single; Orthopaedic; Foam; Spring; Latex; Coir	**Size (King / Queen / Double / Single / Custom)**, **brand**, thickness (5 / 6 / 8 / 10 in), firmness (soft / medium / medium-firm / firm), type (memory foam, pocket spring, bonded, latex, coir, hybrid)	Available L × W sizes per size group, thickness, firmness, layer construction, cover fabric, removable cover, flippable, brand warranty, trial (if brand offers)
Sofas	3-seater, 2-seater, 1-seater, Sofa sets (3+2, 3+1+1), L-shape / sectional (LHS / RHS), Sofa-cum-bed, Recliners, Wooden sofas	Seating capacity, configuration, upholstery (fabric / leather / leatherette / velvet), frame (teak / sheesham / engineered), style	Seat height and depth, frame wood, foam density, seating mechanism, cushion type, firmness, legs, fabric swatches, set contents
Computer tables	Computer tables, Study tables, L-shape desks, Office tables	Shape (straight / L), width (under 100 cm, 100–120, 120+), material, keyboard tray, storage	Top size, height, keyboard tray, CPU/UPS bay, drawers, shelves, load capacity (kg), cable management
Dining (add-on)	4-, 6-, 8-seater sets; tables; chairs	Seating capacity, top material (wood / glass / marble), shape	Table and chair dimensions, set contents, chair upholstery
Wardrobes (add-on)	2-, 3-, 4-door; sliding; with mirror	Doors, material, mirror, locker	Shelves, hanging space, drawers, locker, mirror
Others	TV units, coffee tables, dressing tables, bedside tables	Material, colour, size	Dimensions, storage

Mattress sizes and the "size" model

Size is a variant, not a separate product, so one mattress page offers every size it is made in, each with its own price and stock. The admin keeps a size master per category:

Size group	Common sizes (inches, L × W)
Single	72 × 30, 72 × 36, 75 × 36, 78 × 36
Double / Diwan	72 × 48, 75 × 48, 78 × 48
Queen	72 × 60, 75 × 60, 78 × 60
King	72 × 72, 75 × 72, 78 × 72
Custom	Entered by staff on request

The same model applies to beds (King/Queen/Single), sofas (seater count) and tables (width). Sizes are confirmed against Cot & Couch's actual stock before launch.

Colour and finish variants

- Colours are picked from a colour master (name + hex swatch or fabric photo), so filters stay consistent across products.
- A product can have unlimited colours; each colour has its own image set and can have its own price and stock.
- Wood products use **finish** (teak, walnut, honey, natural); upholstered products use **fabric colour**; some have both.

Admin console

The admin console is a separate, staff-only web app with two roles in Phase 1: **Admin** (full control) and **Team** (day-to-day operations, no pricing or user control). Staff log in with mobile OTP plus a password, and every change is written to an audit log.

Modules

- **AD-01 Dashboard:** today's logins, new leads, top-viewed products, CTA taps (Visit Store / Call / WhatsApp), open deliveries, low-stock list.
- **AD-02 Categories:** create, rename, reorder, hide categories and sub-categories; set a cover image; pick which attribute template and filters apply.
- **AD-03 Attribute templates:** define spec fields and filters per category (text, number, dropdown, multi-select, yes/no, with unit). This is how mattress "size" and "brand" filters or sofa "seating" are set up without code.
- **AD-04 Products:** add/edit/duplicate/archive products; variants (colour × size × configuration) with price, MRP, stock and images per variant; bulk upload via Excel/CSV template; drag-to-reorder images; draft/published states.
- **AD-05 Masters:** colours/finishes (with swatch), brands, collections (Royal Range etc.), size masters.
- **AD-06 Pricing and discounts:** MRP, offer price, max discount cap per product or category, scheduled festival prices with start/end dates.
- **AD-07 Stock list:** one grid of every variant with quantity and status; inline edit; quick +/- adjust with a reason; low-stock threshold; export to Excel.
- **AD-08 Delivered gallery:** upload delivery photos from phone (multi-select), tag product, area and date; auto-compress; approve before it goes live on Home.
- **AD-09 Instagram reels:** paste reel URL, upload the video file and cover, tag to Home / category / product, set order and on/off.
- **AD-10 Sales and deliveries:** record a sale, update delivery status, trigger notifications (next section).
- **AD-11 Leads:** list of logged-in customers with activity, intent score and browsing timeline; filter by product interest and date; segments; export; mark follow-up done (see Customer behaviour section).
- **AD-12 Users and roles:** add/remove staff, assign role, reset access.
- **AD-13 Settings:** store details, timings, WhatsApp number, notification templates, privacy notice text.

Permissions matrix

Action	Admin	Team
View dashboard	Full	Own activity + deliveries
Create / edit categories, attribute templates	Yes	No
Add / edit product content, images	Yes	Yes (goes to admin approval)
Publish / archive products	Yes	No
Change MRP, price, discount cap	Yes	No
Update stock quantities	Yes	Yes
Upload delivered images	Yes (auto-live)	Yes (needs approval)
Manage Instagram reels	Yes	Yes
Create sale, update delivery status	Yes	Yes
View leads and customer numbers	Full + export	Assigned leads only, no export
Manage staff users, settings, templates	Yes	No
View audit log	Yes	No

Permissions are stored per role, so a third role (e.g. Store Manager) can be added later without code changes.

Customer behaviour tracking and personalisation

Every logged-in visit is tracked against the customer's mobile number, so the customer gets an Amazon-style "based on your browsing" home screen and the admin sees exactly which products each person is considering. Because login is mandatory, every view is tied to a known, reachable customer rather than an anonymous cookie.

What is tracked per customer

Event	Details captured
Product view	Product, variant (colour/size) looked at, time on page, number of repeat views

Category and filter use	Categories browsed, filters applied (e.g. King size, under ₹40,000, teak)
Search	Search terms, including ones with no results
Shortlist	Products added to or removed from the shortlist
Media	Product videos and Instagram reels watched
CTA taps	Visit Store, Call, WhatsApp, callback request — per product
Session	Login time, device, number of visits, last active

Customer side: "my browsing" on login

- **PB-01 Recently viewed:** a strip on the home screen of the last 10–20 products viewed, newest first.
- **PB-02 Continue where you left off:** returns the customer to the last category and filters they used.
- **PB-03 Inspired by your browsing:** similar products from the same category, size, price band or collection.
- **PB-04 My shortlist:** saved products, with a one-tap "Share shortlist on WhatsApp" for family decisions.
- **PB-05 Updates on viewed items:** badges such as "Price dropped", "Back in stock" and "Only 2 left" on products the customer viewed or shortlisted.
- **PB-06 Clear history:** the customer can clear their recently viewed list from the menu.

Admin side: customer insights

- **PB-07 Customer profile timeline:** for each mobile number, a dated list of every product viewed, shortlisted and CTA tapped, with visit count and last active date.
- **PB-08 Interest summary:** top categories, preferred size, price band and colours/finishes, worked out from the customer's views and filters.
- **PB-09 Intent score:** Hot / Warm / Cold label from recent activity (e.g. same product viewed 3+ times, shortlisted, or Visit Store tapped in the last 7 days = Hot). Rules editable in Settings.
- **PB-10 Product interest view:** on each product, the list of customers who viewed or shortlisted it in the last 7/30/90 days — useful when stock arrives or a discount starts.
- **PB-11 Segments:** saved filters such as "viewed King beds twice in 14 days, no store visit" or "shortlisted Royal Range sofas"; counts update live.
- **PB-12 Follow-up actions:** from a profile or segment, staff can assign a salesperson, log a call note, or send a personalised WhatsApp ("The Victoria King bed you viewed is now 15% off") using an approved marketing template.
- **PB-13 Export:** segments export as CSV for WhatsApp broadcasts or as a Meta custom audience for retargeting ads.
- **PB-14 Behaviour reports:** most-viewed products, most-shortlisted, products viewed often but rarely enquired about, and top no-result searches (signals for stock to add).

Rules and privacy

- **PB-15** Personalised marketing messages go only to customers who ticked the offers opt-in (CF-04); service and delivery messages are separate.
- **PB-16** The privacy notice states that browsing activity is recorded to personalise the catalogue and offers; customers can withdraw marketing consent at any time.
- **PB-17** Raw activity events are kept for 12 months, then rolled into the summary only.
- **PB-18** Team users see insights only for leads assigned to them; segment export and bulk messaging are Admin-only.

Marketing-category WhatsApp messages in India cost roughly ₹0.78–0.88 each, about six times a utility message, so personalised offers should go to Hot and Warm segments rather than every lead (Robylon).

Sale and delivery workflow

When a sale closes in-store, the team records it and moves it through five statuses; each status change sends a WhatsApp utility message to the customer and an alert to the admin. Utility messages in India cost roughly ₹0.11–0.16 each before provider fees, so five updates per order costs under ₹1 (Robylon, 2026 India pricing); utility messages sent inside an open 24-hour customer-service window are free (AiSensy).

Recording a sale (team or admin): customer mobile (auto-links to their lead record), name, address, product + variant(s), quantity, agreed price, advance paid, expected delivery date, salesperson. Stock is reduced automatically for in-stock variants.

#	Status	Set by	Customer gets (WhatsApp, SMS fallback)	Admin gets
1	Order confirmed	Team / Admin	Order summary, expected delivery date, store contact	New-sale alert
2	In production / ready	Team	"Your order is ready, delivery scheduled for {date}"	—

3	Out for delivery	Team	Delivery date, time window, delivery person's name and number	—
4	Delivered	Team (with delivery photo)	Thank-you, warranty start date, care guide link, review request	**Delivery alert** with photo
5	Closed / Issue raised	Admin	If issue: acknowledgement and ticket number	Issue alert

Rules

- **SD-01** Marking "Delivered" requires a delivery photo; the photo can be pushed to the Home gallery after admin approval (feeds CF-07).
- **SD-02** A status can't be skipped backwards without an admin note; every change is time-stamped with the user who made it.
- **SD-03** Messages use pre-approved WhatsApp templates; the admin can edit wording in Settings, then re-submit for Meta approval.
- **SD-04** If WhatsApp delivery fails, an SMS is sent instead and the failure shows on the order.
- **SD-05** The customer sees their order status after logging in ("My orders"), read-only.
- **SD-06** Delivery and order messages are service messages; promotional messages go only to customers who ticked the offers opt-in (CF-04).

Non-functional requirements

The site must feel instant on a mid-range Android phone over 4G, protect the phone numbers it collects, and be ready for India's DPDP rules.

Area	Requirement
Performance	Largest Contentful Paint under 2.5 s on 4G; images served as WebP/AVIF via CDN in multiple sizes; reels lazy-load and never autoplay with sound
Devices	Mobile-first (360 px up); tablet layout for in-store use; desktop supported
Availability	99.5% uptime; daily database backups kept 30 days
Security	HTTPS everywhere; OTP rate limiting and bot protection on the login form; role-based access on every admin API; admin sessions expire after 12 hours idle; audit log of all admin changes
Privacy (DPDP)	Plain-language privacy notice shown at collection, listing what is collected (mobile, name, browsing) and why; consent logged with timestamp; one-tap withdrawal and account deletion request; marketing opt-in separate from service messages; a named contact for data requests
SEO	Category and product pages need login to view details, so a public teaser (category names, a few hero products, store info) stays indexable; Open Graph tags so WhatsApp shares show a product preview
Analytics	GA4 + Meta Pixel events: login, category view, product view, filter use, Visit Store tap, Call tap, WhatsApp tap
Content limits	Up to 10 images and 2 videos per variant; video max 50 MB, auto-transcoded

The DPDP Rules were notified on 14 November 2025, with the core notice and consent obligations taking effect after 18 months, around May 2027 (SGCMS summary). Building the notice and consent log now avoids a retrofit later.

Development strategy

Build it as a custom web app (Next.js front end + Postgres back end with a ready-made admin framework) rather than on WooCommerce, and deliver in about 10–12 weeks across four sprints. The requirements are catalogue, login gate, roles and a delivery workflow; a shop plugin would mean fighting the cart rather than using it.

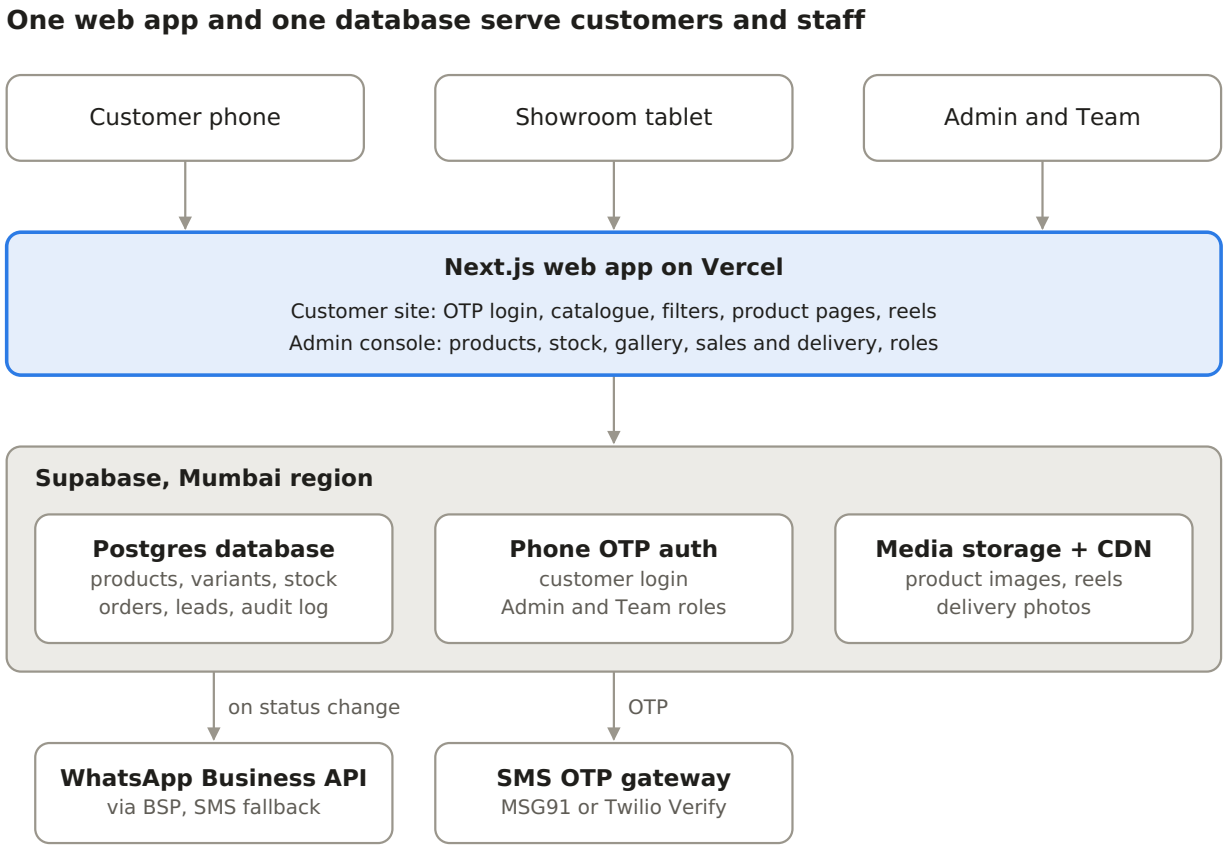

Platform options

Option	Fit for these requirements	Speed to build	Long-term	Verdict
A. Next.js + Supabase (Postgres, phone auth, storage) + custom admin	OTP login, row-level permissions, variant model and status workflow all native	Medium	Fast, cheap to host, easy to add Phase 2 features	**Recommended**
B. Laravel + Filament admin + Blade/Livewire front end	Very fast admin screens and role permissions out of the box	Fast for admin, slower for a polished mobile front end	Solid; needs PHP hosting	Good alternative if the team is PHP-first

C. WordPress + WooCommerce in catalogue mode	Variants and filters exist, but OTP gate, Team role limits, delivery workflow and stock-by-variant edits are plugins or custom code	Fast to start, slow to finish	Plugin sprawl, slower pages	Not recommended

Recommended stack

- **Front end:** Next.js (React) with server-side rendering, Tailwind UI, installable as a PWA so staff can add it to the showroom tablet's home screen.
- **Back end and data:** Supabase — Postgres database, phone OTP auth, row-level security for Admin/Team rules, file storage for images and videos.
- **Media:** image CDN with auto-resize (Cloudinary or Supabase image transforms); videos transcoded to MP4/HLS.
- **OTP SMS:** MSG91 or Twilio Verify via Supabase phone auth (DLT-registered sender ID and template required in India).
- **WhatsApp:** WhatsApp Business Platform (Cloud API) through a BSP such as Interakt, AiSensy or Gupshup; utility templates for order statuses.
- **Hosting:** Vercel (front end) + Supabase cloud (Mumbai region for data residency and latency).
- **Analytics:** GA4 + Meta Pixel + internal event table for the admin dashboard.

Customers, the showroom tablet and staff all use the same web app; role rules in the database decide what each person can see and change.

Core data model

- **Category** (parent, name, order, attribute template) → **Attribute** (name, type, unit, filterable)
- **Product** (name, category, collection, brand, description, highlights, warranty, status) → **Variant** (colour, size, configuration, SKU, MRP, price, max discount, stock qty, stock status) → **Media** (images/videos per variant)
- **Masters:** Colour (name, hex/swatch), Brand, Collection, Size
- **Customer/Lead** (mobile, name, area, consent flags, first/last seen, intent score, assigned salesperson) → **Event** (type, product, variant, filters, search term, time on page, timestamp) → **Interest summary** (top categories, size, price band) · **Segment** (saved rules) · **Shortlist**
- **Order** (customer, items, price, advance, salesperson) → **Order status history** (status, user, time, photo) → **Notification log** (channel, template, delivered/failed)
- **Gallery item** (photo, product, area, date, approved) · **Reel** (video, cover, IG link, tags, order)
- **Staff user** (role) · **Audit log**

Delivery plan

1. **Weeks 1–2 — Discovery and design:** sign off this document, collect Cot & Couch's product list, sizes, prices and photos; wireframes and UI design for 8 key screens; WhatsApp BSP and SMS DLT registration started (approval can take 1–2 weeks).
2. **Weeks 3–5 — Sprint 1, catalogue core:** data model, admin for categories/attributes/products/variants/masters, bulk upload, customer OTP login and consent.
3. **Weeks 6–7 — Sprint 2, customer experience:** home, listing with filters and sort, PDP with variant switching, CTAs, Instagram reels, delivered gallery.
4. **Weeks 8–9 — Sprint 3, operations:** stock list, sales and delivery workflow, WhatsApp/SMS notifications, leads, behaviour tracking (recently viewed, customer timeline, intent score, segments), dashboard, Team role permissions, audit log.
5. **Weeks 10–11 — Content and testing:** load the first 100–150 products, UAT with the store team on a showroom tablet, performance and security checks.
6. **Week 12 — Launch:** go-live, staff training (one session each for Admin and Team), 30-day hypercare.

Running costs to plan for

WhatsApp utility messages are the only usage-linked cost that scales with sales, at roughly ₹0.11–0.16 per message plus 18% GST and any BSP markup (Robylon). Hosting, SMS OTP, BSP subscription and domain are fixed monthly items to be quoted once the BSP and SMS provider are chosen.

Open questions for Cot & Couch

- ☐ Should prices be visible to every logged-in visitor, or only a "price on request" for some premium lines?
- ☐ Is the "max discount cap" shown to customers, or used only by staff as a negotiation limit?
- ☐ Which mattress brands are stocked, and in which exact sizes and thicknesses?
- ☐ How many products and colour variants at launch (estimate per category)?
- ☐ Do they want a showroom-tablet mode where staff browse without each customer logging in?
- ☐ Which WhatsApp number sends notifications — the existing store number (must move to the API) or a new one?
- ☐ Who on the team gets Admin vs Team access, and should leads be assigned to salespeople?
- ☐ Is there a second location or warehouse whose stock should be shown separately?
- ☐ Domain and branding assets: logo files, brand colours, fonts.

Phase 2 backlog

- EMI calculator and finance partner links
- Room visualiser / AR "view in your room"
- Visit-slot booking with staff calendar
- Customer reviews and ratings with delivery photos
- Quote/estimate PDF generator for staff, shared on WhatsApp
- Marketing broadcasts to opted-in customers (festival offers)
- Multi-store stock and Store Manager role
- Optional online advance payment to reserve a piece
